

ABSTRACT

The present invention provides a treated pigment and a dispersion composition thereof having preferable
5 dispersion stability and fluidity in a dispersion medium even the pigment has no functional group reactive with a carbodiimide group on the surface thereof, and further to provide a resist composition exerting very excellent
developing characteristics when forming color filters,
10 black matrices and the like patterns. Furthermore, the invention also provides a compound for pigment treatment suited for the treatment of such pigment.

The present invention relates to a treated pigment which is producible by the treatment with a carbodiimide-
15 based compound having at least one side chain selected from the group consisting of polyester side chains, polyether side chains and polyacrylic side chains and at least one basic nitrogen-containing group within the molecule.
